

The **MailPoint** Postal Franking System - the complete solution that offers the ultimate in franking

The intelligent high volume franking systems to satisfy any mailroom requirement ...

Intelligent high volume mailing..

The **MailPoint** is the High Volume choice for ease-of-use and advanced functionality.

- Quiet fast operation with one-touch controls
- Intelligent 'In Motion' Weighing & Measuring Option
- Envelope processing speeds of up to 150 letters per minute
- 50 Departmental Accounts / Cost Centres

RELIABILITY THROUGH BETTER DESIGN

The **MailPoint** operates at speeds of up to 135 letters per minute and virtually eliminates the common problems associated with processing mail in office settings. The new transport and digital printing system automatically adjusts for different envelope thickness and prints clearly on even or uneven surfaces up to 16mm thick. The new wider feed platform ensures smooth, stable operation on large envelopes, even the usually more difficult portrait style. And the integrated mail accounting helps you monitor and allocate costs for more control of your mailing budget. All this means a simple, effortless mailing operation with less downtime, less hassle and higher productivity.

HIGH QUALITY MIXED MAIL FEEDING PRINTING

The **MailPoint's** Printing System based on ink jet technology, can process mail at a speed of 135 pieces per minute. This high quality non impact printing system offers you a jam free operation. Designed for productivity, **MailPoint** handles various envelopes in size and thickness without any operators' adjustments..

ACCOUNTING MADE EASY

The **MailPoint**, allows you to easily recharge your postal costs, either to other departments or to customers, with mail accounting capabilities for up to 50 accounts. Accounting records can be printed onto franking labels or through an external printer.

SAVE TIME AND MONEY

High-volume post users will benefit from huge annual savings with the **MailPoint** INTELLIGENT dynamic scale. By checking not just the weight, but also measuring length, width and thickness of items in motion, it ensures your franking equipment applies the correct postage. Working at up to 7,200 items per hour, it can halve the time it takes to process mixed weight mail runs. Demands on your staff are reduced, as there is no need to collate mail into same size/weight batches prior to franking.
