

FRANKING MACHINE

Fn Series 7

A popular system for all mailing needs. The franking machine that always keeps pace with your requirements with a modular and expandable design.

FRAMA Fn Series 7

DON'T COMPROMISE, EXPAND!

Fn Series 7 - the modular system.
The modular solution for modern and professional looking business mail.

Your all-rounder for the different types of mail

The Fn Series 7 offers high flexibility for your mailroom with three different feeders and three different scales. All feeders and scales can be combined with the base. Thus the Fn Series 7 grows with your requirements.

Thanks to the large display, you can keep your postage costs under control and speed up your outgoing mail through strong performance and maximum productivity. A wide variety of mail types can be processed easily and efficiently without adjustments.

The Fn Series 7 is equipped with an intuitive operating concept. The use of smart keys in conjunction with the user interface ensures that only relevant functions can be selected. With up to 300 cost centers, the Fn Series 7 increases efficiency and makes a lasting contribution to the success of your business.

Frama AG pursues the goal of developing solutions that combine efficiency, high quality and a high degree of environmental compliance. All products and services meet international quality standards.

Product highlights Fn Series 7

Automatic feeding

The automatic feeder with fully automatic adjustment of the letter width processes all letter formats from C6 to B4.

Label dispenser

With the label dispenser, large letters and parcels with your advertising message can be easily franked individually. This means that even mail in extraordinary formats do not fall by the wayside.

OLS Softwareupdates

The Frama OLS data center automatically updates, ensuring that your Fn Series 7 is always stays up to date.

A detailed view of a FRAMA Fv Series 75 franking machine. The machine is light grey with a control panel on top. The control panel features a color LCD screen displaying a form with fields for 'To', 'From', 'Post', 'City', and 'Country'. Below the screen is a keypad with 10 keys, including a red 'Start/Stop' button and a green 'Access transport' button. A collecting tray is visible on the right side, containing a stack of franked letters. The machine is shown from a three-quarter perspective, highlighting its compact and functional design.

Scale and options

Determines the weight of your mail and displays the appropriate postage. Weighs mail up to 35kg. Additional options support you in efficient mail processing.

Keypad with 10 keys

Flexible entry of pin codes and number combinations.

Start/Stop Function

Starts and ends the franking process.

Collecting tray

Secure storage of franked outgoing mail.

Access transport system

A blockage of letters can be cleared within a few steps and in a very short time.

ABOUT FRAMA & SERVICE FEATURES

Learn more about our company and our service

Businesses are becoming increasingly aware of the advantages of introducing digital technology into the workplace to automate many office workflows and processes.

It is our mission to help guide businesses through the digital transformation process to increase efficiencies and productivity rates as well as provide information mobility throughout an organisation.

Frama is noted for its consultative approach and ability to meet the customer's requirement by working with our customer to select the correct solutions and products ensuring we meet the customer's needs. This is what makes Frama one of the most trusted partners for business in this sector.

Frama has the ability to work with businesses and organisations of all sizes and has the flexibility and speed to meet requirements from multi-site requirements, bespoke solutions and specifically secure and efficient packages for home workers.

In today's world the risks of cyber-crime and compliance must also be considered and many legacy workflows leave organisations open to cyber fraud and non-compliance.

For more than 50 years, we have specialized in the development and manufacture of mail processing and secure data management systems. Frama has continued to innovate and to make us the solution provider for all aspects of local and international written business communication when efficiency, integrity, and innovation is required.

Automation usually follows on from the introduction of lower-level digital transformation. These might include digitising priority business processes such as HR, marketing, sales and finance. It may include ensuring email communication is secure using a unique and easy to use encryption service or the introduction of e-signature software or putting in place a basic managed print services (MPS) strategy. One of the main pillars of our approach is to ensure that any automation that is proposed is not only efficient but secure.

Our promise to you:

- Consultative approach - Ensuring you are provided with the best solution for your business needs liaising with one of our technology specialists
- Customer service - Each new member of staff is inducted through the Frama CareS programme which highlights our commitment to customer service
- Aftersales - Frama recognises that as well as providing high quality products and tailor made solutions the quality of the after sales service is a major factor when deciding on which supplier to partner with
- Service with a familiar voice - Frama provides a UK based service centre trained to the highest standards of customer care via the Frama CareS customer training modules that all staff attend at regular intervals
- Latest technology - high quality products backed by unrivalled after sales service and support. Providing a end-to-end solution for all sizes of business
- Certification - Frama is certified for IT security as per ISO 27001 and FIPS 140-2 Level 3, the highest security requirement for Cryptographic Modules
